

EDUARD SHESTOPALOV *Senior Software QA / AI Automation*

shedwardio@gmail.com | 053-771-7494 | Kiryat Motzkin, Haifa, Israel | linkedin.com | ed-qa.github.io

SUMMARY

Senior Software QA / Automation QA Engineer with 12+ years of experience in E2E web and mobile testing across Windows, Android, and iOS. Strong background in enterprise QA delivery, Playwright automation, API testing, SQL validation, CI/CD QA integration, production defect investigation, and L2/L3 technical support. Experienced in functional, regression, exploratory, UI/UX, cross-browser, debugging, and release validation workflows. Worked closely with development, product, BA/BSA, design, and support teams in Agile/Scrum environments.

EXPERIENCE

Testlio, *Senior Quality Assurance Automation Engineer*

01/2026 – Present
Israel

- Worked on QA automation for global enterprise clients: Playwright, API testing, CI/CD QA integration + production defect investigation.
- Built and maintained Playwright E2E suits automating approx. ~65-70% of manual regression flows and saving up to 12+ hours of manual work per sprint
- Improved automation stability with reusable fixtures/components, stable selectors, clear assertions, used page object model approach for automation and better test data handling.
- Integrated automated tests into GitLab CI/CD using Docker-based runners, improving consistency across local, staging, and pipeline executions.
- Used GitHub Copilot, Claude, and OpenAI Codex app to speed up test design, code review, edge-case analysis, and automation framework setup by ~35%.
- applied using of OpenAI Codex integrated in VS Code to draft and refine Docker configs and GitLab CI/CD pipeline templates for QA automation environments.
- Investigated defects across Python, JS/TS, Java, C#, and Bash services/scripts using logs AI-assisted code analysis with Codex/Claude.
- Owned API testing with Postman, Swagger, and SQL checks. Built lightweight k6 load/performance scripts with Grafana reporting to catch bottlenecks before release.
- Integrated OWASP ZAP baseline scans into the QA validation flow.
- Managed test docs, regression matrices, and defect tracking in TestRail, Xray, Azure DevOps/TFS, and Jira, improving traceability by ~40%.
- Stack: Playwright, Postman, Swagger, k6, Docker, GitLab CI/CD, Jira, TestRail, Xray, Azure DevOps/TFS, OWASP ZAP, Grafana, Git, SQL, MySQL, MongoDB, Charles Proxy, Browser DevTools, Copilot, Claude, OpenAI Codex.

Trinetix, *Software QA engineer / Technical Support (L2/L3)*

03/2018 – 01/2026
Nashville, TN, USA + Kiev, Ukraine

- Led QA delivery for 12+ enterprise and mission-critical web platforms, including CRM, fintech, access management, content sharing, and AI-processing systems.
- Reviewed requirements, designs, and user flows early in the SDLC, finding unclear logic, risky edge cases, flaky behavior, and over-complicated UX before development. Helped reduce rework and prevent avoidable bugs.
- Created and maintained E2E test plans, test suites, scenarios, checklists, bug reports, release reports, feature documentation, and support materials.
- Performed SQL-based data validation and verification, including checks for business logic, data consistency, and issue investigation.
- Worked with AWS-based environments, validating deployments, configuration changes, and environment-specific behavior.
- Investigated production and pre-production issues end to end using logs, database checks, Browser DevTools, Charles Proxy, and system behavior analysis. Supported L2/L3 troubleshooting for internal users, external users, and customers.
- Escalated complex issues to development teams with clear reproduction steps, logs, affected data, expected vs. actual results, and technical impact.
- Collaborated with developers, designers, BA/BSA, product owners, and support teams during requirement reviews, sprint testing, release validation, and defect triage.
- Maintained QA documentation and defect workflows in Jira and Azure DevOps. Supported releases after delivery, helped onboard junior QA engineers, and led knowledge-sharing sessions.
- Used Testim.io for low-code UI automation with reusable test steps/components; completed Tricentis Testim certification.
- Used Playwright, including Codegen, to capture user flows, draft tests, generate locators, reproduce scenarios, and support code-based automation coverage.
- Used AI tools with JS, TS, and Python to generate, review, and improve automation tests, test data setup, and framework configuration.

2K-Group, *Software QA engineer / Technical Specialist*

11/2015 – 03/2018
Kiev, Ukraine

- Tested web and mobile applications across Windows, Android, and iOS platforms for 4 client projects and supported after delivery
- Created test cases, checklists, test suites, scenarios, and related QA documentation

- Performed functional, regression, localization, exploratory, and UI testing. Reported defects, verified fixes, collaborated closely with developers during issue resolution
- Participated in release validation for 16+ product releases
- Coordinated testing activities and communication with product and development teams from GB, Canada, USA, Sweden, and other locations
- Provided product usability and user experience improvement recommendations. Supported junior QA team members and knowledge-sharing activities

Friendly orange (Traveling Pixel Games), QA - for Web, iOS, Android platforms (Kiev, Ukraine)	06/2014 – 11/2015 Kiev, Ukraine
- Mobile & Web Testing: Executed comprehensive functional and exploratory testing across iOS, Android, and desktop browsers for optimal gameplay. - Device Matrix Management: Managed physical device fragmentation challenges across various screen sizes and OS versions to ensure compatibility. - Defect Lifecycle Management: Isolated and documented performance, UI, and network-throttling bugs using Jira to accelerate developer fixes. - Tools & Environment: Jira, TestFlight, HockeyApp, Charles Proxy, Xcode, Android Studio, ADB, Firebug.	

"Legal Practice" newspaper (web), Site editor, content editor, users support, DB admin (Kiev, Ukraine)	09/2011 – 05/2014 Kiev, Ukraine
- Platform Management: Handled daily site updates, managed content publishing, and ensured overall platform stability. - Database & Support: Managed the backend database while directly troubleshooting technical issues and bugs for end-users. - QA Collaboration: Partnered with the development team to reproduce localized bugs, test site updates, and flag system regressions.	

EDUCATION

Magister of Political Science and Socio-Humanities (honors diploma), <i>National Dragomanov University</i>	2005 – 2010 Kiev, Ukraine
